Company Overview

Founded in 1929

Revenue of €60.8 billion

Underlying Sales Growth
of 4.2%

€12,974 million as of 2024

120,000+ employees

Located in London, UK

Major city locations Netherlands,
USA, India, China, and
Singapore

Primary products list

- Beauty & Wellbeing
- Personal Care
- Home Care
- Nutrition
- Ice Cream (The Magnum Ice Cream Company)

Representative customers &
industries served

- Retail stores
- E-commerce
- Convenience stores
- Wholesale

Project overview

Business Problem	Unilever faced lost sales due to stockouts caused by unoptimized inventory management
Scope	Image capture > cloud Ai > brand/stock determination > Order generation algorithm > Data insights. Global deployment
Technology	IoT – Cameras / sensors, AI, Data analytics, smart liquid lining
Timeline	CoolIR Group
Cost	Not provided

Technology Overview

Unilever's Pilot Program

1. Digitizing the Value Chain
2. Sensing Demand with Smart Tech
3. Location Data for Targeted Delivery

Market size

Implemented across the world in multiple different areas, including:

- Turkey
- Latin America
- North America

Market Insights

- Customer preference shifting towards digital
- The recent growth of cloud storage and AI has forced businesses to adapt
- Unilever is rapidly adapting these technologies to meet their needs

Technology Overview, cont'd.

Implementation challenges and actions

Scaling AI across 3M global freezers	Phased rollout in top-selling cabinets within priority markets (100K installed, expanding to 350K)
AI integration with distributor systems	Embedded AI order recommendations
Weather-driven demand volatility	AI forecasting + weather data
Responsive refrigerated logistics	Optimized delivery route planning

Benefits achieved

1. Increase in sales growth
2. Cost optimization by reducing wastage
3. Real-Time Inventory updates
4. Improved Supply Chain
5. Customer Satisfaction
